- **Security and compliance** to fit your business requirements

Backup is a critical part of any IT setup. As an IT professional you understand the importance of protecting business data. The everyday task of backing up data can be time consuming, expensive and unsecure. You need a solution that is easy, secure, scalable and cost effective. A solution that protects data everywhere - on physical servers, virtual servers, endpoints and in your cloud.

Although backup is critical, the recovery should be your top priority. JT offer a monitored cloud backup solution. Our experienced technical team monitor the backup for inconsistencies and proactively report any discrepancies back to you. JT ensure that when the time comes your data is recoverable, consistent and intact. Our 24/7 Support team are there to help you every step of the way. You are in good hands with our highly skilled team that have years of experience in the data protection industry.

JT takes the most up to date technologies and combines them with excellent personal service and competitive pricing.

Our various technologies handle mixed environments - Windows, Linux, VMware, Hyper-V, Exchange, SQL and many more. Also cloud applications such as Office365, Google Apps or Salesforce.
